EXECUTIVE SUMMARY

Computer Science and Engineering graduate with a specialization in AIML from SRM Institute of Science and Technology, Tiruchirappalli. Possessing strong technical skills in Python, Machine Learning, Generative AI, and full-stack development, with hands-on experience in developing AI-driven applications, RAG-based chatbots, multi-agent systems, and predictive analytics solutions. Demonstrated ability to apply innovative technologies to solve real-world problems.

EDUCATION

B.Tech., Computer Science & Engineering (Artificial Intelligence and Machine Learning) **CGPA: 8.4/10**
SRM Institute of Science and Technology, Tiruchirappalli, Tamil Nadu, India 2022 – 2026

SKILLS

Technical Skills: Python, HTML, CSS, Streamlit, Git, GitHub
AI/ML: Machine Learning, Artificial Intelligence, Generative AI, Hugging Face, RAG, LangChain

PROJECTS

AI Stock Intelligence & Prediction Platform
Designed an autonomous multi-agent financial intelligence system using Cohere's LLM as a "Head of Research," Fundamental, and Sentiment analyst agents. Integrated yfinance, TextBlob, and technical indicators to process real-time stock data and generate heuristic scores with natural-language Buy/Hold/Sell verdicts for informed investment decisions.

Generative AI for Mental Health Crisis Counseling Bots
Developed a full-stack AI mental health support system using React, FastAPI, Google Gemini, LangChain, and FAISS for personalized conversational assistance. Implemented NLP-based emotion detection, crisis-risk classification, RAG, personalized memory, mood/risk analytics, wellness recommendations, and crisis alert workflows to provide safer, personalized, and context-aware user support.

Crop Yield Prediction using Random Forest
Developed a machine learning-based crop yield prediction system using an agricultural dataset with features such as rainfall, temperature, humidity, soil properties, and crop type as inputs. Implemented a regression model to learn the relationship between environmental conditions and crop yield, enabling accurate forecasting of production per hectare.

INTERNSHIP

Full-Stack Developer Intern — K12 Hunar *October 2026 – Present*
Currently working on the company's CRM software as part of the Software Development team, contributing to the development and maintenance of live products. Responsibilities include developing responsive user interfaces, building backend functionality, integrating APIs and databases, and implementing authentication and role-based access.

Software Developer — ARMSS Group of Companies *Full Stack Web Application*
Developed a full-stack Nidhi financial management application using React.js, FastAPI, PostgreSQL, and SQLAlchemy for managing members, loans, deposits, FD/RD schemes, transactions, vouchers, and reports. Implemented JWT authentication, role-based access control, financial workflows, REST APIs, and automated customer application PDF generation using ReportLab and pypdf.

AI Summer Intern — Mirai School of Technology *July 2026 – August 2026*
Developed AI applications using Python, Streamlit, Gemini API, Pandas, OpenPyXL, and Pollinations AI, focusing on Generative AI, prompt engineering, and multimodal applications. Built conversational AI, image generation, visual storytelling, digital wellbeing, and spreadsheet automation applications with API integration, code validation, data visualization, and cloud deployment.

PUBLICATION

- **Saravanan S**, "Crop Yield Prediction Using Random Forest Algorithm", published in the 2026 International Conference on Future and Advanced Computing Technologies (ICFACT), IEEE, March 2026.

CERTIFICATIONS

Deloitte – Data Analytics Job Simulation
Business Intelligence Fundamentals – Simplilearn
The Complete Python Developer – Udemy
Introduction to Containers w/ Docker, Kubernetes & OpenShift – IBM
